

UNIVERSITY OF TEXAS AT DALLAS

CHILDREN'S ASSENT TO PARTICIPATE IN RESEARCH (Ages 7-17)

Purpose of Testing:

This project will see whether you like using virtual reality to learn about gravitational waves and black holes.

Testing Procedure:

You will wear a headset to watch animated black holes in 3D. You will use input devices to control the black holes and see how this changes the gravitational waves they make. The project will take 1 hour.

Bad and Good Things about the Testing:

A very small number of people don't feel well after using virtual-reality headsets, but most people enjoy it. You will get to experience virtual reality and learn about how gravitational waves were discovered.

Stopping the Testing:

You can say you want to stop at any time. You can stop even if your parents do not want you stop.

If you sign this paper, you are saying that you understand the testing. You also understand that you can ask questions and stop the testing at any time.
